

ABSTRACT

A double eyelid forming tape or string that can form an eyelid with a clear fold easily and safely in a simple manner, and a method of manufacturing the same is provided.

It is constructed by applying an adhesive 2 on a narrow tape member 1 being resiliently elastic, or being stretchable and exhibiting resilient elasticity after being stretched, and providing holding portions 3 having no adhering property on the surfaces at both ends thereof for holding by fingertips. A fold of the double eyelid is formed by pressing the tape member 1 on the position of the eyelid where the user wants to form a fold in a state where both ends thereof are held and stretched, adhering the tape member 1 thereon with the adhesive 2, and releasing the same. Therefore, when the tape member 1 under a tension resiliently contracts, it breaks into the eyelid 7 and forms an eyelid with a fold.
